

The Tolar difference: End-to-end Quality Control

From materials sourcing to process control to fit-and-finish, Tolar delivers the value

A reputation as one of the premier designers and manufacturers of transit shelters, outdoor furniture and advertising displays doesn't occur by chance. It's the result of the commitment Tolar Manufacturing makes to investing in both materials specification and fabrication processes with a rigor unmatched in the industry.

Here's why Tolar shelters, furniture, receptacles and displays are considered best in class:

Our customers. We take pride in listening to customers like you and striving to execute according to your needs and your goals.

The design process. Beautiful designs add to the aesthetics of the community and significantly enhance the streetscape. But style must be backed by substance, and Tolar maintains an engineering team on retainer and engineers who are licensed in all 50 states and using the latest design software. That assures that every Tolar structure is in compliance with local building codes.

Materials specifications. The metals used in crafting Tolar's shelters, kiosks and other structures are specifically sourced for optimal strength during cutting, bending, drilling and welding. We invest in quality, because we know it takes the best to make the best.

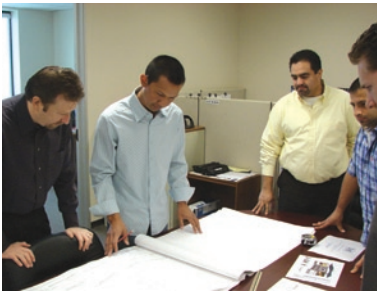

Manufacturing standards. Tolar products are fabricated in the United States by a team of experienced craftsmen to best-in-category levels of durability and structural integrity. Our powder coating process withstands high-pressure cleaning, graffiti removal solvents and the long-term impact of salt, sun and climate extremes.

Custom capability. For structures installed in public spaces, style matters. Don't settle for generic designs—not when you can opt for a look that's unique to your project, your constituency and your community. With Tolar's wide-ranging choices, your shelters and outdoor structures can deliver sizzle and substance.

Sustainability. Encouraging sustainability is now a critical business mandate, and attractive shelters encourage mass transit utilization, an environmental positive. Tolar offers shelters and benches made with recycled materials, a powder-coat process that produces no VOCs (volatile organic compounds) and LED lighting options powered by low-draw 110-volt or solar.

Our entire Tolar team brings specific areas of expertise to our manufacturing process. They're the reason we feel confident in being able to take your project from concept to completion, as easily and seamlessly as possible.

Tolar's specialty: Creating outdoor structures of durability and distinction that reflect the character of their communities.

DURABILITY WITH DISTINCTION
